- B) Restrooms
- C) Horseshoes
- D) Shuffle Board
- E) Heritage House
- F) Fountain
- G) Plaza

Electrical

**DO NOT OVERLOAD
CIRCUITS!!!**

Figure out the amps required for each appliance with the following formula:

$$\text{Amps(A)} = \frac{\text{Watts(W or VA)}}{\text{Volts(V)}}$$

Sometimes the amps may be listed on the appliance. Add together the amps from individual appliances in such a way to stay below the maximum limit per circuit. To be safe, stay 3-4 amps below the maximum, meaning 16-17 amps for a 20 amp circuit.
